

Change management – batch 2

Discontinuation of servlets, viewing and manual download from the client portal

The clients portal is gradually making way for two new environments which our clients are already making considerable use of.

1. Access to “open” data

*Servlets are programmes which are used to build applications which generate dynamic webpages (HTML, XML). They are web links integrated into applications for retrieving data. This technology is now obsolete, having been superseded by APIs.

2. The data will be switched in batch 2

- Daily load curves
- Year ahead forecast margin
- Unavailability of generation resources
- Calendar for Tempo-like supply contracts
- Forecast for the week ahead
- PP1 and PP2 signals
- Daily capacity/price curve

3. Correspondence between old and new offering

Old Client Portal Offering

New Services and Data Portal Offering

Data available on the Clients portal	Client portal servlets	Data Portal Open API	Viewing and manual download Services Portal
Daily load curves	-	Consumption <ul style="list-style-type: none"> Short_term 	Daily load curves
